V6 REFERENCES FOR EU HUMAN HEALTH RISK ASSESSMENT:

(Studies in progress since latest draft:
2 generation rat reproduction/development study
Absorption, Distribution, Metabolism and Excretion study in rats)

Marcenac 2002: Determination of Dermal and Inhalation Exposure of Operators during the production of three flame retardant chemicals covered by the 4th priority list, Study N°: 01 R 469 A, Author and study director: Dr Françoise MARCENAC, RHODITECH, Laboratoire d’hygiène Industrielle, 24 Avenue Jean Jaurès, 69153 DECINES CHARPIEU CEDEX – France

Mobil Environmental and Health Science Laboratory (1983a). Skin irritation of AB-100 (Antiblaze 100) after a single application to albino rabbits. (Unpublished report).

Mobil Environmental and Health Science Laboratory (1983b). Primary eye irritation of AB-100 (Antiblaze 100) in albino rabbits. (Unpublished report).
Mobil Environmental and Health Science Laboratory (1983c). Evaluation of the mutagenic potential of 2,2-bis(chloromethyl)-1,3-propylene bis[bis(2-chloroethyl)]phosphate (P-CEP) in the mouse lymphoma (L5178Y/TK+/−) mutagenesis assay. (Unpublished report).

Mobil Environmental and Health Science Laboratory (1985b). Determination of the effect of antiblaze 100 on cholinesterase activity in the rat. (Unpublished report).

Mobil Environmental and Health Science Laboratory (1985c). Determination of the effects of three antiblaze 100 samples on cholinesterase activity in rat serum. (Unpublished report).

Mobil Environmental and Health Science Laboratory (1985d). Determination of the effects of antiblaze 100 on cholinesterase activity in the rabbit. (Unpublished report).

TDCP STUDY REFERENCES FOR EU HUMAN HEALTH RISK ASSESSMENT

Cuthbert, J.E. and Mullee, D.M 2002a: TDCP: Determination of general physicochemical properties, Report 1613/008, SafePharm Laboratories, PO Box 45, Derby, UK.

Cuthbert, J.E. and Mullee, D.M 2002b: TDCP: Determination of water solubility and partition coefficient, Report 1613/004, SafePharm Laboratories, PO Box 45, Derby, UK.

TCPP REFERENCES FOR HUMAN HEALTH RISK ASSESSMENT

(Studies in progress since last draft assessment report:
   In vitro metabolism study
   2 generation rat reproduction/development study)

Bayer AG. (1991b). Tris-chloroisopropyl phosphate: Mutagenicity test on unscheduled DNA
synthesis in rat liver primary cell cultures in vitro. (Unpublished report).

( Unpublished report).

Environmental Affairs and Toxicology Department. (1980). An Ames Salmonella/mammalian
microsome mutagenesis assay for determination of potential mutagenicity of Tris (2-

Environmental Affairs and Toxicology Department. (1981a). Four hour acute inhalation toxicity

Environmental Affairs and Toxicology Department. (1981b). Acute inhalation toxicity study of
tri(2-chloropropyl) phosphate. (Unpublished report).

Environmental Affairs and Toxicology Department. (1981c). A murine lymphoma mutagenesis
assay, heterozygous at the thymidine kinase locus for the determination of the potential
mutagenicity of Antibleaze 80. (Unpublished report).

(Unpublished report).

Huntingdon Life Sciences Ltd. (1997b). Amgard TMCP 1 Acute oral toxicity to the rat.
(Unpublished report).

Inveresk Research International. (1989a). Tolgard TMCP: acute oral toxicity (LD50) test in the
rat. (Unpublished report).

Inveresk Research International. (1989b). Tolgard TMCP: Acute dermal toxicity (LD50) test in

(Unpublished report).

(Unpublished report).

(Unpublished report).

Mobil Environmental and Health Science Laboratory. (1980b). Dermal toxicity of Tris (2-chloropropyl) phosphate, lot PP-2B, in albino rabbits after a single exposure. (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1980b, revised). Dermal toxicity of Tris (2-chloropropyl) phosphate, lot PP-2B, after a single application to albino rabbits. (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1980c). Skin irritation of Tris (2-chloropropyl) phosphate, lot PP-2B, in albino rabbits after a single exposure (revised). (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1980d). Eye irritation of Tris (2-chloropropyl) phosphate, lot PP-2B, in albino rabbits after a single exposure (revised). (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1981a). The acute oral toxicity of Tris (2-chloropropyl) phosphate “Antiblaze 80” in albino rabbits. (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1981b). The acute dermal toxicity of Tris (2-chloropropyl) phosphate “Antiblaze 80” in albino rabbits. (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1981c). Primary skin irritation of Tris (2-chloropropyl) phosphate “Antiblaze 80” after a single application to albino rabbits. (Unpublished report).

Mobil Environmental and Health Science Laboratory. (1981d). Primary eye irritation of Tris (2-chloropropyl) phosphate “Antiblaze 80” in albino rabbits. (Unpublished report).

SafePharm Laboratories Ltd. (1979a) Determination of the acute oral median lethal dose (LD50) of Tris mono chloropropyl phosphate. (Unpublished report).

SafePharm Laboratories Ltd. (1979c). Determination of the acute percutaneous median lethal dose (LD650) after 24 hours exposure of Tris Mono chloropropyl phosphate. (Unpublished report).

SafePharm Laboratories Ltd. (1994b). Amgard TMCP isomers CW94/1 to CW94/7; Screening oral toxicity study in the rat. (Unpublished report).
